

*For Butt-Master  
Carriers*  
Cord Draw

*For Overlap-  
Master Carriers*  
Baton Draw

## Understanding Kirsch Ripplefold Drapery System

### Q & A

**1. Should the hardware be hung higher than the window?**

The Ripplefold heading is 2", so 2 ½"-3" above the window would be fine.

**2. If I want to combine butt-master with baton draw, can that be done?**

This is out of standard, but the rod can be modified upon request. The baton would be positioned behind the panel.

**3. How do the new ball-bearing carriers affect stack back?**

They will have a spring back action resulting in a larger stack back.

**4. Where is the location of the baton?**

There are three choices for this:

- 1) Baton front - grommet front with stiffener allows the baton to snap on the front
- 2) Baton front with no grommet with clip
- 3) Baton in the back of the panel with clip

**5. How do I figure out return size?**

Wall mounted can be 2 ½" up to 6", and ceiling mount can be varied depending on location. Always check the hardware before ordering.

**6. Does MYL use a stiffener in the heading?**

We use a 2" translucent, lightweight stiffener as our standard.

**7. Can butt-master carriers be used for one-way draw?**

Yes, but only for cord draw, not baton.

**8. Do snap tapes come in different sizes?**

The snap tape spacing never changes, only the carrier spacing. Fullness % can be specified for fabric fullness.

**9. Do traversing rods allow for both carrier types?**

Yes, butt-master and over-lap master

**10. Are other brands compatible with Kirsch tape?**

You should specify what hardware you are using, but Kirsch hardware is recommended.

**11. Can we reuse existing hardware?**

You should specify the brand and be careful to list # of carriers, master carrier type and returns.

**12. How are the drapes snapped to the rod?**

We suggest putting the pendants into the drapes first and then snapping the pendants into the carriers.
